Addendum: Information Disclosure Statement

Bell, et al, cites the use of uncooked corn starch as the preferred complex carbohydrate in his invention (5th paragraph under Summary). In other preferred embodiments, he lists 6 other carbohydrates: nuts, barley, bulgur, rice, dried legumes or a mixture thereof.

In claim 1 of 27 the supplement bar is administered at bedtime for all night blood control. Mr. Bell, what about the rest of the day?

Kaufman, Patent number 6, 339, 076, cites uncooked cornstarch as the preferred complex carbohydrate. (See Abstract).

In the detailed description of the invention (e, paragraphs 3, 4, 5 and 6) gives content description without giving the amount of cornstarch. Why?

In said above invention, claim 1 of 61 claims, the range of uncooked cornstarch is 5 - 15 grams of cornstarch in a unit having 20 - 50 grams of nutrients.

None of the above said references gives a specific amount of uncooked cornstarch. Why?

My novel invention is, "Whole grain corn alone levels blood sugar." It's a 24 hour safety net. 5 grams of whole grain corn, six times a day, every day. It's cost effective for everyone; everywhere they shop.

I'm including in the "Information Disclosure Statement" 2 reference materials of the said prior arts product.

- 1) Mailing carton box of Extendbar
- 2) Extendbar mail order form

Cost effective and availability is part of my patent application. While it is not so much an essential part of the ingredients and design use, it is essential in that the product of the invention is affordable for all and is everywhere one shops.
